

CLIENT PROFITABILITY INDICATORS (YEAR 2030) EMIIA.AI SIP

1. COSTS

- TCO (Total Cost of Ownership): \$1.5 billion/year
Formula: CapEx + OpEx = \$1.5 billion/year (RSC/year and CAC included)

2. USER ECONOMICS

- CAC (Customer Acquisition Cost): \$3
- RSC (Retention & Support Costs): \$7/year
- ARPU (Average Revenue Per User): \$3/month or \$36/year
Formula: ARPU = Total revenue / number of active users
- ARPPU (Average Revenue Per Paying User): \$10/month or \$120/year
Formula: ARPPU = Revenue from paying users / number of paying users
- LTV (Lifetime Value):
Formula: LTV = (ARPPU – RSC) × Customer lifetime
Calculation: (\$120/year – \$7/year) × 7 years = \$113/year × 7 years = \$791

3. MARKET

- TARGET (Total Addressable Market):
 - › Volume: 1.67 billion users
 - › Capacity: \$1.2 trillion/yearFormula: The total market combines cloud, IoT, and RTLS, covering all key segments: B2B, B2C, B2G, as well as interaction between humans, machines, and AI agents (B2M, M2M, AI agents)
- ACTIVE (Active Users):
 - › Volume: 100 million
 - › Potential capacity: \$8.4 billion/yearFormula: Active users × ARPPU – 30% adjustment (100 million × \$84/year); reflects maximum possible mixed revenue
- CORE/AR (Paying Users):
 - › Volume: 30 million
 - › Revenue: \$3.6 billion/yearFormula: Paying users × ARPPU
(30 million × \$120/year)
